REFRIGERATION DESIGN OF INDIANA SERVICE OFFERINGS

Refrigeration System Design

Innovative designs focusing on direct expansion and secondary loop systems. Understanding installation costs usually drive a project, Refrigeration Design of Indiana strives to meet project budgets while providing energy-efficient systems with low operating and maintenance costs.

Emergency Commissioning

Review (baseline setting) of a complete refrigeration system. Focus on proper adjustment of pressure, temperature and defrost control. Systems are fine-tuned to maximize performance resulting in reduced energy consumption and demand.

Refrigeration Systems Audit

Evaluation of refrigeration systems, advising owners on the remaining equipment life cycle. Determining causes of reoccurring equipment failures and the solutions for that repair. Specific advisement towards upgrades, retrofits, and EPA compliance.

Project Management

Direct to the owner or for contractors, Refrigeration Design of Indiana has the experience to manage any refrigeration project ensuring that specifications and schedules are met while maintaining project budgets and following through with proper project closeout.

Specification Creation/Implementation

Assisting owners in creating a baseline and demanding a level of quality. We can create the documentation needed to ensure owners are receiving what was paid for. Additionally, specifications spell out payment terms, insurance requirements, bonding, and prevent warranty issues just to name a few. In today's business climate a specification is a must to ensure owners are protected.

In-House Training

In-house training for owners' maintenance teams, store operations, and contractors. Training can be tailor-fit for a particular need or a range from basic to advanced refrigeration.
